

FLEXIBLOCK

Linear bottle rinsing, filling, capping, capsuling & labelling system for high-strength spirits, edible oils and vinegars

Flexiblock - Compact Linear Bottle Packaging System

Product description:

FLEXIBLOCK - 1500bph flexible spirit, edible oil, vinegar rinsing filling capping labeling capsuling monoblock.

The **FLEXIBLOCK** does not require any change parts when swapping bottle formats.

These bottling lines are made specifically for filling spirits/liquors (as well as olive oil, vinegar, & other food liquids) at low speed but automatically in glass bottles of any size and shape.

The **FLEXIBLOCK** is a compact linear system designed for low speeds, and has a very special, unique feature. This exclusive system is capable of handling on a single complete line, different format bottles, without any change parts thanks to our special bottle handling system.

This key advantage is very much appreciated in distilleries, where usually many different (and complex) bottles are processed, and production batches are small.

The complete bottle size changeover is performed by simple and easy adjustments from the main HMI touchscreen panel. Changeovers are performed using servo-driven motors for rapid and accurate changeovers.

IC Filling Systems can supply very compact systems to perform the total bottling cycle, from rinsing and filling to labeling (front, back & neck) including capping, capsuling, coding and seal/tax strip application in fully automatic mode.

It is a unit with a very compact footprint, easy to install and easy to manage.

We can also guarantee:

- Total respect of the product being filled especially suitable for high-end top quality products.
- Application of nearly every kind of caps (ROPP, screw, press-on) and capsules (PVC, or tin/poly laminate).
- Application of different labels, front, back, neck, and u-seals with extreme accuracy.
